

CARE INSTRUCTIONS

You have spent effort in finding the perfect design and product. It is important that our customers know how to take care of them in the best way possible!

Printed apparel (direct-to-garment)

We use the latest direct-to-garment (DTG) printing technology to offer a wide variety of printable garments and design color options. We use high-quality inks that will not fade for a long time if taken care of properly.

Keep in mind that the original manufacturer's care instructions do not take into consideration the DTG printing process. So, we suggest following the care instructions on this page to learn how to take care of your printed garments properly.

Printed apparel can be machine-washed cold, inside-out on a gentle cycle with a mild detergent and like colors. Use non-chlorine bleach only when necessary. You should not use any fabric softeners or dry-clean the items.

DTG-printed apparel can be tumble-dried on a low cycle, but hang-dry works best. When it comes to ironing, use cool iron inside-out. Do not iron the print.

Follow these instructions carefully to avoid fading and cracking of the print and shrinking the garment that can occur if you wash or dry it on a high setting.

Embroidered apparel

Embroidered apparel can be machine-washed cold, inside-out on a gentle cycle with a mild detergent and like colors. You can use a small amount of chlorine bleach, but non-chlorine is the safer option.

If you notice any color residue in water, rinse the garment in lukewarm water and then in cold several times, but try not to rub any stained embroidery. Embroidered clothing can also be dry-cleaned.

After washing, do not leave the clothing to soak or lie in a pile while wet. Do not wring out the embroidered items, but if you want to tumble-dry them, use a cool air setting.

If the garment needs ironing, do it inside-out, preferably between two pieces of cloth. You should not wet embroidery before ironing or use a steam iron.

Embroidered hats and backpacks

Embroidered hats and backpacks can be wiped clean with a damp cloth in the spots where it is needed. If necessary, hats can be hand-washed cold. Do not use brushes.

Both hats and backpacks cannot be machine-washed, bleached, tumble-dried, ironed, and dry-cleaned. Read the manufacturer label carefully for any other instructions.

Embroidered aprons

Embroidered aprons can be machine-washed at 86°F (30°C) or less. Do not use bleach. They can be tumble-dried on a low cycle. Read the manufacturer label carefully for any other instructions.

All-over printed apparel and hats

All-over printed apparel can be machine-washed cold with like colors, without bleach. Do not dry-clean or tumble-dry the apparel. You can iron it with a low heat setting.

All-over printed swimwear

You should only hand-wash the All-Over Print Recycled High-Waisted Bikini, Bikini Top, and Bikini Bottom. Do not use bleach, do not dry-clean, or tumble-dry them. You can iron the recycled bikinis with a low heat setting.

All-Over Print One-Piece, Bikini, Bikini Top, Bikini Bottom, Kids Swimsuit, and Youth Swimsuit have the same care instructions as all-over printed apparel—they can be machine-washed cold with like colors, without bleach. Do not dry-clean or tumble-dry the swimwear. You can iron it with a low heat setting.

All-Over Print Face Masks

All-Over Print Face Masks can be machine-washed at 140°F (60°C) with like colors, without bleach. They cannot be dry-cleaned. You can tumble-dry the face masks on low heat and iron on a cool setting.

Bags

All-over print backpacks, fanny packs, and duffle bags need to be hand-washed without bleach. Do not dry-clean or tumble-dry the bags. You can iron these bags with a low heat setting.

All-over print totes and drawstring bags can be machine-washed without bleach on a cold cycle. They cannot be tumble-dried or dry-cleaned. You can iron these bags with a low heat setting.

Pillows and pillowcases

Pillowcases can be machine-washed without bleach on a cold cycle. Do not dry-clean or tumble-dry the pillowcases. You can iron them with a low heat setting.

The pillow inserts should not be washed, bleached, tumble-dried, ironed, or dry-cleaned.

Bean Bag Covers

The cover of the Bean Bag can be machine-washed on a cold cycle without bleach. Do not dry-clean or tumble-dry the cover. You can iron it with a low heat setting.

Sublimation socks, blankets, towels, and laptop sleeves

Sublimation socks, blankets, towels, and laptop sleeves can be machine-washed cold with like colors at no more than 86°F (30°C). Do not use bleach and do not dry-clean. It is best to hang-dry, but tumble-drying can be used on a low cycle if necessary.

Sublimation flip flops

Sublimation flip flops can be hand-washed in warm water with a mild neutral detergent.

Mugs

Our White Glossy Mugs and White Ceramic Mugs with Color Inside are microwave and dishwasher safe, but the print and coating will last longer if you hand-wash them.

Matte Black and Glossy Black Magic Mugs, however, should only be hand-washed, and you cannot put them in a microwave. Note that they are also prone to scratches, so be extra careful.

The same goes for our Enamel Mugs that should only be hand-washed. Also, you cannot heat liquids or food directly in the Enamel Mugs—it can damage their coating.

Posters and Canvas

To ensure that your posters and canvas last for a long time, do not keep them in direct sunlight or outdoors. They can be gently dusted with a soft dry cloth or a feather duster.

Phone Cases

To clean a phone case, remove the case from your phone. Add a little mild soap to water and dampen a cloth or sponge with it. With the damp cloth, rub your case gently in circles. Let your case air-dry at room temperature.

Do not clean your phone case with any alcohol-based products as they can remove the ink and discolor the case.

Jewelry

Do not wear the jewelry while showering, swimming, washing dishes, applying perfume, or doing sports. When not wearing it, store it in the box you received it in.

After wearing the jewelry, we recommend wiping it with a non-abrasive jewelry polishing cloth to remove dirt and tarnish. But to fully remove tarnish and any stains on the jewelry, use silver or jewelry polish. Follow the instructions on the bottle carefully and use gloves when working with silver polish.
